INTRODUCTION

MercyCare Health Plans (MCHP) maintains a drug formulary as a guide for providers to prescribe ambulatory medications. Medications are listed under the 2-Tier Formulary, 3-Tier Formulary, and 4-Tier Formulary. The MercyCare Pharmacy and Therapeutics (P&T) Committee of physicians and pharmacists endorse the agents listed based on product selection criteria. There may be occasions when an unlisted drug is desired for medical management of a specific patient. In those infrequent instances the unlisted medication may be requested through the Drug Exception process. MercyCare reserves the right to change the formulary at any time without notice. For complete benefit explanation please review your certificate of coverage and your drug rider or summary plan description.

MercyCare will honor all requests for paper copies of any and all material on our website; however, we cannot take responsibility for notifying you when those paper copies have become outdated. Generally our formulary is updated monthly.

FORMULARY OPTIONS

MercyCare Health Plans (MCHP) offers different formulary options to its members, based on the number of tiers, which are identified on the front of the member's insurance card. The member's drug plan depends on the benefit selected by the employer or individual. If you have questions about which formulary is available for a member's drug plan, please call customer service at (800) 895-2421. MCHP's formulary options are as follows:

Two Tier

- Tier 1 is for preferred generic drugs and has the lower co-payment.
- Tier 2 covers selected generic drugs, brand name drugs, and clinically-appropriate non-covered drugs by approval and has the higher co-payment.

Three Tier

- Tier 1 is for preferred generic drugs and has the lowest co-payment.
- Tier 2 covers selected generic drugs and brand name drugs, and has the second lowest co-payment.
- Tier 3 represents all non-preferred drugs and clinically-appropriate non-covered drugs by approval, and has the highest co-payment.

Four Tier

- Tier 1 is for preferred generic drugs and has the lowest co-payment.
- Tier 2 covers selected generic drugs and brand name drugs, and has the second lowest co-payment.
- Tier 3 represents all non-preferred drugs and clinically-appropriate non-covered non-specialty drugs by approval, except specialty drugs, and has the third lowest co-payment.
- Tier 4 covers only selected generic drugs, selected brand name drugs, specialty drugs, and clinically-appropriate non-covered drugs by approval, and has the highest co-payment.

FORMULARY KEY

The formulary is divided by Alphabetical Index and then Category/Class.

The back of the formulary also has specific sections:

- Prior Authorization Drug List
- Over-the-Counter (OTC) Medications
- Mandatory Specialty Pharmacy (MSP) Medications
- Smoking Cessation Agents
- Quantity Limit (QL) Medications

In drug classes where there are several products on the market, only certain products within that class may be on the formulary. By limiting the products available, it is possible to reduce drug costs through the use of generic drugs and cost-effective choices. The key below demonstrates the meaning of the symbols in the formulary.

OTC	Over-the-Counter. Specific OTC products are covered with a prescription.
SP	Available through Specialty Pharmacy Program. SP drugs may be available and required to be filled at a Mercy Pharmacy, depending on your plan.
MSP	Mandatory Specialty Pharmacy Program. Specialty Pharmacy will be used to dispense selected medications. Members will select a Mercy Pharmacy to obtain the prescribed medication. A different Network Specialty Pharmacy may be designated, depending on the drug and/or plan.
PA	<p>Prior Authorization. PA criteria established. The P&T Committee has decided that PA drugs be used only in specific circumstances. Prescribers must follow the PA procedure to request coverage.</p> <p>Please see the Prior Authorization Procedure section for more detail. Prescriber must follow PA procedure to request coverage for PA drug. If denied or if PA was not submitted by the prescriber, the member pays 100% of the medication cost.</p>
QL	<p>Quantity limits are established to promote safe and appropriate cost-effective use of specific classes of medications for both formulary and non-formulary agents.</p> <p>All members may receive a maximum of 30 days supply unless otherwise specified by drug rider or summary plan description or by quantity limits listed in the formulary.</p>
NC	<p>Not Covered. Check the formulary for alternative medications that are covered.</p> <p>Drug Exception Procedure: Please see the Drug Exception section for more detail. If the physician believes that a drug not covered or not found on MercyCare formulary is necessary for the patient, then he or she must apply for the drug exception. Prescriber's office must fax a completed Non-Formulary request form to MercyCare Health Plans at (608) 758-7726. Forms are available at www.mercycarehealthplans.com.</p>

For complete benefit explanation please review your certificate of coverage and your drug rider or summary plan description. If you are concerned about coverage of a particular drug on a MercyCare Health Plans (MCHP) drug plan, you may call customer service at:

COVERED DRUGS

This prescription drug program provides coverage for drugs that satisfy the following criteria:

- Any prescription drug or insulin in the MercyCare drug formulary, or
- Insulin syringes, or
- Any medication compounded by the participating pharmacy that contains a covered prescription drug.

The medication also must be:

- Medically necessary for patient's medical condition and appropriate given the patient's medical history; and
- Prescribed in a manner consistent with its FDA approval and manufacturer recommendations; and
- Prescribed in its most cost-effective dosing regimen; and
- Used in a manner consistent with any and all guidelines and criteria developed, adopted, or researched by MercyCare.

Prescription drug coverage applies to drugs provided to ambulatory patients and dispensed by the MercyCare network of retail pharmacies. The pharmacy benefit plan is managed internally. Co-payment amounts vary, depending on the plan selected by the employer group or individual. Each member's MercyCare identification card indicates the co-payment amount required for each prescription.

Limited additional coverage exists under the medical benefit for drugs administered on an outpatient basis in the physician's office. Drugs administered to hospitalized patients are covered directly in MercyCare's payment to the hospital and are also excluded from the prescription drug coverage.

Drug Coverage for MercyCare

- Most members can receive a supply of medication not exceeding 30 days for one co-pay. Some members have an enhanced benefit allowing them to receive up to a 90-day supply of certain medications. The MercyCare Customer Service Department can verify if the member has the enhanced benefit, and identify the drugs which can be prescribed in the larger supply.
- Covered drugs are only those available on a prescription basis; exclusions include most over-the-counter (OTC) medications. A limited number of OTCs are available and listed in the formulary.
- Insulin, diabetes monitoring products, and associated syringes and needles are covered.
- Generally, there is no coverage for other injectable medications unless it is included under the prior authorization process.

Generic Medications

MercyCare covers and encourages the use of generic medications. Generic medications have the same active ingredient as the brand name and have undergone vigorous scientific comparison studies that are approved by the Federal Food and Drug Administration (FDA). If a brand-name medication is not available in a generic form, members must pay a higher co-pay as outlined in their policy. Co-pay amounts are indicated on the prescription drug rider or summary plan description.

NON-COVERED DRUGS

Prescription drug benefits are not available for the following:*

- Fertility drugs.
- Replacement of any lost, stolen, or destroyed medications.
- Therapeutic devices or appliances, including hypodermic needles or syringes (except for diabetic supplies)
- Any drug or medicine that is administered or delivered by the health care provider to you.
- A brand name drug when it is available as a generic.
- A generic or brand name drug when it is covered as OTC.
- A specialty drug that is not obtained from the designated specialty pharmacy.
- Any drug or medicine which is taken by or administered to you while you are a patient in a licensed hospital, rest home or sanitarium, extended care facility, convalescent hospital, skilled nursing facility or similar institution.
- Any drug labeled “Caution: limited by Federal Law to investigational use” or other wording having similar intent, experimental drugs, FDA approved drugs used for non-FDA approved uses, or FDA approved drugs used in non-FDA approved regimens, even though a charge is made to you, except that coverage shall be provided for any prescription drug which meets the following criteria:
 - a. Is prescribed for the treatment of HIV infection or an illness or medical condition arising from or related to HIV infection; AND
 - b. Is approved by the Federal Food and Drug Administration, including phase-3 investigational drugs; AND
 - c. If the drug is an investigational new drug, is prescribed and administered in accordance with the treatment protocol approved by the Federal Food and Drug Administration for the investigational new drugs.
- Anabolic steroids.
- Anti-obesity and anorexients.
- Growth hormones.
- Any prescription drug for a non-covered procedure or the treatment of a complication from a non-covered procedure/service.
- Any prescription drug for a sickness or bodily injury not covered by the Plan.
- Medication other than prescription drugs or preferred OTC drugs with or without a prescription order.
- Prescription drugs, which the eligible person is entitled to receive without charge under any Worker’s Compensation laws or any municipal state or federal program.
- Nutritional supplements.

***For complete benefit explanation please review your certificate of coverage and your drug rider or summary plan description.**

PRIOR AUTHORIZATION (PA) PROCEDURE

Drugs indicated with a PA are not covered unless they have been prior authorized by MercyCare Health Plans. The physician must apply for prior approval for a specific patient and a specific drug and dose. The request must fulfill PA criteria. This procedure ensures that these drugs are used in a manner consistent with all of the criteria cited in the section COVERED DRUGS.

The following information will be needed when requesting prior approval:

- 1. Patient name, member number, and date of birth**
- 2. Physician name, phone number and fax number**
- 3. Drug, strength and dosage form**
- 4. Duration of therapy**
- 5. Documentation of medical necessity**

A Prior Authorization request form must be faxed to (608) 758-7726.

If you need a copy of the Prior Authorization request form, please visit our website at www.mercycarehealthplans.com, or contact customer service at (800) 895-2421.

Drug	Prior Authorization Criteria
Acitretin (Soriatane)	<ul style="list-style-type: none"> • Diagnosis of moderate to severe plaque psoriasis >10% BSA • Prescribed by dermatologist • Failure (6-month trials) or contraindications to therapies in two of the following categories: topical agents (corticosteroids, tazarotene, calcipotriene), suppressive agents (cyclosporine, methotrexate), and remitting agents (PUVA or UVB)
Actimmune	<ul style="list-style-type: none"> • Prescribed by specialist according to FDA indication • Failure of preferred agents
Addyi	<ul style="list-style-type: none"> • Diagnosis of acquired, generalized hypoactive sexual desire disorder (HSDD) as characterized by low sexual desire that causes marked distress or interpersonal difficulty and is NOT due to: <ul style="list-style-type: none"> ○ A co-existing medical or psychiatric condition ○ Problems with the relationship ○ The effects of a medication or other drug substance • Patient is a premenopausal woman • Patient abstains from alcohol use • Is not on moderate to strong cytochrome P450 3A4 (CYP3A4) inhibitors or inducers • No hepatic impairment • Prescriber is certified with the Risk Evaluation and Mitigation Strategy (REMS) Program • Treatment is discontinued after 8 weeks if no improvement
Adempas	<ul style="list-style-type: none"> • Prescribed by pulmonologist or cardiologist • Persistent/recurrent chronic thromboembolic pulmonary hypertension (CTEPH) (WHO group 4) to improve exercise capacity and WHO functional class, and patient had surgical treatment or has inoperable CTEPH, OR • Pulmonary arterial hypertension diagnosed by right heart catheterization, and failure of vasodilators, calcium channel blockers, and sildenafil (Revatio)
Afinitor	<ul style="list-style-type: none"> • Prescribed by oncologist • Diagnosis of advanced renal cell carcinoma with a failed trial of sorafenib (Nexavar) or sunitinib (Sutent), OR • Subependymal giant cell astrocytoma (SEGA) associated with tuberous sclerosis (TS) in a patient who is not a candidate for surgical resection, OR • Neuroendocrine tumors (NET) of the pancreas, OR • Noncancerous kidney tumors (renal angiomyolipomas) not requiring immediate surgery in patients with tuberous sclerosis complex, OR • Advanced hormone receptor-positive, HER2-negative breast cancer in a postmenopausal woman in combination with exemestane (Aromasin) AND failed letrozole (Femara) or anastrozole (Arimidex)
Albenza	<ul style="list-style-type: none"> • Prescribed according to FDA indication • Documentation of diagnosis
Alecensa	<ul style="list-style-type: none"> • Prescribed by oncologist or hematology specialist • Diagnosis of anaplastic lymphoma kinase (ALK)-positive, metastatic non-small cell lung cancer (NSCLC) • Documentation of mutation as detected by FDA-approved test • Progressed on or intolerant to crizotinib (Xalkori)
Alinia	<ul style="list-style-type: none"> • Diagnosis of giardiasis with trial of metronidazole OR diagnosis of Cryptosporidium parvum infection • Maximum 3 days of therapy • Suspension use limited to patients under 12 years old
Alunbrig	<ul style="list-style-type: none"> • Prescribed by, or in consultation with, an oncologist • Diagnosis of ALK-positive metastatic non-small cell lung cancer (NSCLC) • Patient has tried and failed or is intolerant to any other ALK inhibitor
Anzemet	<ul style="list-style-type: none"> • Request from oncology • Diagnosis of cancer with the treatment of a highly emetogenic (HEC) or moderately emetogenic (MEC) chemotherapeutic regimen as defined by the ASCO or MASCC • Failure of preferred agents, promethazine, metoclopramide & ondansetron • Quantity limit 9 tablets per month
Apokyn	<ul style="list-style-type: none"> • Diagnosis of advanced Parkinson's disease • Prescribed by a neurologist
Aranesp	<ul style="list-style-type: none"> • Chemotherapy for a minimum of 2 months • Malignancy indications other than myeloid malignancy • Hemoglobin is <10 g/dL • Trial of Retacrit required

Drug	Prior Authorization Criteria
Armodafinil (Nuvigil) or modafinil (Provigil)	<ul style="list-style-type: none"> • Diagnosis of narcolepsy confirmed by sleep studies, such as polysomnogram (PSG) and multiple sleep latency test (MSLT), OR • Diagnosis of sleep apnea and continue to have residual sleepiness despite effective CPAP use and therapy
Atypical antipsychotics (Fanapt, Invega, Latuda, Rexulti, Saphris)	<ul style="list-style-type: none"> • Prescribed according to the FDA indication • Consulted or prescribed by psychiatry • Trial and failure or contraindication to risperidone (Risperdal) • Trial and failure or contraindication to other preferred formulary atypical antipsychotics, such as ziprasidone, quetiapine, olanzapine
Banzel	<ul style="list-style-type: none"> • Diagnosis of Lennox-Gastaut Syndrome • Prescribed by or consulted with neurologist • Recurrent seizures despite trial of 2 or more concurrent medications • Prior use (including current use) of the following formulary alternatives: lamotrigine, topiramate, felbamate, clonazepam, and valproic acid
Benlysta (Medical or Pharmacy Benefit)	<ul style="list-style-type: none"> • Prescribed by or in consultation with a rheumatologist or dermatologist • Diagnosis of active, autoantibody-positive, systemic lupus erythematosus (SLE) in an adult patient who is receiving standard therapy • Patient is anti-double stranded DNA (anti-dsDNA) positive (concentration ≥ 30 IU/ml) and/or anti-nuclear antibody (ANA) titer positive, with measurements at two different points in time [Documentation Required] OR <ul style="list-style-type: none"> ◦ Patient has low complement (C3/C4) [Documentation Required with reference range and patient values] • Requires daily use of corticosteroids, unless contraindicated • Trial and failure of or contraindication to all of the following therapies: hydroxychloroquine, methotrexate, azathioprine, mycophenolate mofetil, and cyclophosphamide • Patient does not have severe active lupus nephritis or severe active central nervous system (CNS) Lupus • Belimumab will not be given in combination with other biologics or intravenous (IV) cyclophosphamide • Continuation of therapy or IV to SC Transition <ul style="list-style-type: none"> ◦ Prescribed according to FDA indication by or in consultation with a rheumatologist or dermatologist ◦ Documentation of disease stabilization and improvement ◦ Patient does not have severe active lupus nephritis or severe active CNS Lupus ◦ Belimumab will not be given in combination with other biologics or intravenous cyclophosphamide
Benznidazole	<ul style="list-style-type: none"> • Prescribed by or in consultation with an infectious disease specialist • Patient has serologically confirmed <i>T. cruzi</i> infection • Patient does not have congestive heart failure (Kuschnir Class III) due to Chagas cardiomyopathy • Not recommended for patients over 50 years of age
Biologics, Dermatology (Humira, Enbrel, Cosentyx, Otezla, Cimzia)	<p>Cosentyx, Enbrel, Humira, Otezla – Psoriasis</p> <ul style="list-style-type: none"> • Prescribed by a dermatologist • Patient has at least one of the following: <ul style="list-style-type: none"> ◦ Diagnosis of moderate to severe plaque psoriasis $\geq 10\%$ BSA (body surface area) and significant functional disability ◦ Debilitating palmoplantar psoriasis • Failed a minimum of 15 sessions of phototherapy, or phototherapy is contraindicated • Failed methotrexate (minimum dose of 15 milligrams/week) or failed acitretin (Soriatane) • Supporting chart notes or documentation submitted with this request, such as: <ul style="list-style-type: none"> ◦ Documentation of disease severity and progression ◦ Medication dose, duration, response, adverse reactions or contraindications ◦ Phototherapy type, duration, response, adverse reactions or contraindications • Otezla will NOT be used in combination with biologic therapy • Continuing therapy: <ul style="list-style-type: none"> ◦ Prescribed by a dermatologist ◦ Patient has demonstrated a significant improvement in their condition ◦ Documented (<i>written explanation accepted</i>) improvement within the past year submitted with this request ◦ Otezla will NOT be used in combination with biologic therapy <p>Cimzia – Psoriasis</p> <ul style="list-style-type: none"> • Prescribed by a dermatologist • Diagnosis of moderate to severe plaque psoriasis • Trials of two of the following were ineffective, contraindicated, or not tolerated: Cosentyx,

Drug	Prior Authorization Criteria
	<p>Enbrel, Humira, Otezla</p> <ul style="list-style-type: none"> • Continuing therapy: <ul style="list-style-type: none"> ○ Prescribed by a dermatologist ○ Patient has demonstrated a significant improvement in their condition ○ Documented (<i>written explanation accepted</i>) improvement within the past year submitted with this request <p>Humira – Hidradenitis Suppurativa</p> <ul style="list-style-type: none"> • Prescribed by a dermatologist • Diagnosis of severe hidradenitis suppurativa (total abscess or inflammatory nodule count \geq 3) • Tried and failed at least one oral antibiotic (<i>documentation including trial and dates is required</i>) • Continuing therapy: <ul style="list-style-type: none"> ○ Patient has demonstrated a significant improvement in their condition ○ Documentation is required for approval (based on abscess/nodule size and/or number)
Biologics, Gastroenterology (Humira, Cimzia)	<p>Humira – Crohn’s Disease</p> <ul style="list-style-type: none"> • Prescribed by a gastroenterologist • Diagnosis of moderately to severely active Crohn’s disease • Patient is 6 years of age or older • Inadequate/lost response to conventional therapy such as corticosteroids, azathioprine, methotrexate, or 6-mercaptopurine <p>Cimzia – Crohn’s Disease</p> <ul style="list-style-type: none"> • Prescribed by a gastroenterologist • Diagnosis of moderately to severely active Crohn’s disease • A trial of Humira was ineffective, contraindicated, or not tolerated <p>Humira– Ulcerative Colitis</p> <ul style="list-style-type: none"> • Prescribed by a gastroenterologist • Diagnosis of moderately to severely active ulcerative colitis • Inadequate response to immunosuppressants such as corticosteroids, azathioprine, methotrexate, or 6-mercaptopurine • Initial therapy is approved for 8 weeks • Continuing therapy: <ul style="list-style-type: none"> ○ Patient has demonstrated a significant improvement in their condition ○ Documented (<i>written explanation accepted</i>) improvement within the past year submitted with this request (<i>documentation required for approval</i>)
Biologics, Rheumatoid Arthritis (Enbrel, Humira, Orencia, Actemra, Cimzia, Kevzara)	<p>Enbrel or Humira</p> <ul style="list-style-type: none"> • Prescribed by a rheumatologist • Diagnosis of rheumatoid arthritis • Tried one or more conventional disease-modifying antirheumatic drugs (DMARDs) alone (e.g. methotrexate, sulfasalazine, hydroxychloroquine, leflunomide, corticosteroids) or in combination, and must have included methotrexate \geq20 mg/week for at least 8 weeks. <ul style="list-style-type: none"> ○ Optimal therapeutic dosing of sulfasalazine is at least 2 g/day; of hydroxychloroquine is 400 mg/day; and of leflunomide is 20mg/day. • Provide dates and doses of conventional DMARD therapy, dates of utilization of methotrexate \geq20 mg/week, dose-limiting side effect(s), if applicable, and contraindications to the use of methotrexate, if applicable <ul style="list-style-type: none"> ○ A contraindication to methotrexate does NOT cancel the requirement of a 3-6 month trial of conventional DMARDS. • Indicate one of the following: <ul style="list-style-type: none"> ○ No response after 3 months. Must have used methotrexate \geq20 mg/week for 8 weeks during that 3 month period. No response is defined as no change in the Simple Disease Activity Index (SDAI) or Clinical Disease Activity Index (CDAI) score. ○ Did not reach goal at 6 months. Goal at 6 months is defined as remission (SDAI score of 0.0-3.3, CDAI score of 0.0-2.8) or low disease activity (SDAI score of 3.4-11.0, CDAI score of 2.9-10.0) <p>Orencia</p> <ul style="list-style-type: none"> • Prescribed by a rheumatologist • Diagnosis of rheumatoid arthritis • Patient experienced ineffectiveness, a contraindication to, or did not tolerate Enbrel or Humira <p>Actemra, Cimzia, Kevzara</p> <ul style="list-style-type: none"> • Prescribed by a rheumatologist • Diagnosis of rheumatoid arthritis

Odomzo	<ul style="list-style-type: none"> • Diagnosis of locally advanced basal cell carcinoma (laBCC) • Prescribed by oncologist • Recurrence following surgery or radiation therapy or is not candidate for surgery or radiation therapy • Intolerance to Erivedge (vismodegib) • Limited to 15-day supply for each fill for the first 3 months
Onfi	<ul style="list-style-type: none"> • Diagnosis of Lennox-Gastaut Syndrome • Prescribed by or consulted with neurologist • Recurrent seizures despite trial of 2 or more concurrent medications • Prior use (including current use) of the following formulary alternatives: lamotrigine, topiramate, felbamate, clonazepam, and valproic acid
Orkambi	<ul style="list-style-type: none"> • Prescribed by a pulmonologist at a Cystic Fibrosis (CF) Center of Excellence • Age ≥ 12 years • Homozygous for the F508del CFTR mutation documented by an FDA-cleared Cystic Fibrosis mutation test • Baseline ppFEV1, BMI, and 12 month exacerbation history provided • Chronic sinopulmonary, GI, or nutritional abnormalities related to CF • Continuation of coverage <ul style="list-style-type: none"> ○ Adherence to therapy check based on claims data ○ Current ppFEV1, BMI, and number exacerbations provided by prescriber (data)
Overactive Bladder - Darifenacin SR (Enblex), Oxytrol, Toviaz, Trospium SR (Sanctura XR)	<ul style="list-style-type: none"> • Failure of preferred formulary agents such as oxybutynin (ER), tolterodine (ER), and Vesicare
Oxsoralen Ultra, 8- MOP	<ul style="list-style-type: none"> • Diagnosis of moderate to severe plaque psoriasis >10% BSA • Prescribed by dermatologist • Failure (6-month trials) or contraindications to therapies in one of the following categories: topical agents (corticosteroids, tazarotene, calcipotriene), suppressive agents (cyclosporine, methotrexate)
Oxycodone ER (Oxycontin), Oxycodone IR	<ul style="list-style-type: none"> • Diagnosis of chronic pain • Current pain contract • Random urine toxicology screens • Coordination of care with surgery, pain management, addictions, rehabilitation medicine • Preferred agents failed or contraindicated (MS Contin, fentanyl patches)
PCSK9 inhibitor (Repatha or Praluent)	<ul style="list-style-type: none"> • Homozygous familial hypercholesterolemia (HoFH): <ul style="list-style-type: none"> ○ Prescribed by, or in consultation with, a cardiologist, lipidologist, or endocrinologist ○ Prescriber is, has consulted with, or is affiliated with, a Familial

Prior Authorization Criteria

- Hypercholesterolemia Specialist (<https://thefhfoundation.org/find-fh-specialist>)
- Patient has:
 - Two parents diagnosed with HeFH OR genetic confirmation of LDL receptor mutation
 - Two of the following:
 - Xanthomas present ≤ 10 years of age
 - Atherosclerotic disease ≤ 20 years of age (written documentation required)
 - Untreated total cholesterol > 290 mg/dL or LDL-C > 190 mg/dL
 - Most recent full lipid panel, including Apo-B, and 2 previous lipid panels
 - Not being used in combination with Juxtapid, Kynamro or apheresis
 - Clinical atherosclerotic cardiovascular disease (ASCVD) or Heterozygous familial hypercholesterolemia (HeFH) and unable to meet LDL goal:
 - Prescribed by, or in consultation with, a cardiologist, lipidologist, or endocrinologist
 - Patient has one of the following:
 - Clinical atherosclerotic cardiovascular disease (ASCVD) defined by one of the following:
 - Acute coronary syndromes (ACS)
 - History of myocardial infarction (MI)
 - Ongoing angina (stable or unstable)
 - Prior coronary or other arterial revascularization
 - Prior stroke or transient ischemic attack (TIA)
 - Peripheral arterial disease of atherosclerotic origin
 - Heterozygous familial hypercholesterolemia, defined by one of the following:
 - DNA-based evidence of mutation in the LDLR, Apo B, PCSK9 mutation
 - Untreated LDL-C > 190 mg/dl AND Tendon xanthomas in patient or first/second degree relative
 - Untreated LDL-C > 190 mg/dl AND either first degree relative <60 years of age or second degree relative <50 years of age with premature heart disease
 - Untreated LDL-C > 190 mg/dl AND First or second degree relative with total cholesterol >290 mg/dl
 - Recent fasting lipid panel (< 3 months) provided
 - Patient has failed an 8 week trial of high-intensity statin (atorvastatin ≥ 40 mg OR rosuvastatin ≥ 20 mg) in combination with ezetimibe
 - Prescriber attests that patient was adherent to therapy
 - LDL level remains > 100 mg/dL OR
 - LDL level remains > 70 mg/dL AND patient has diabetes.
 - Documentation of trial attempts must be submitted, including trial dates and LDL levels before and after.
 - Clinical ASCVD or Heterozygous Familial Hypercholesterolemia (HeFH) and unable to tolerate statins:
 - Prescribed by, or in consultation with, a cardiologist, lipidologist, or endocrinologist
 - Patient has one of the following:
 - Clinical atherosclerotic cardiovascular disease (ASCVD) defined by one of the following:
 - Acute coronary syndromes (ACS)
 - History of myocardial infarction (MI)
 - Ongoing angina (stable or unstable)
 - Prior coronary or other arterial revascularization
 - Prior stroke or transient ischemic attack (TIA)
 - Peripheral arterial disease of atherosclerotic origin
 - Heterozygous familial hypercholesterolemia, defined by one of the following:
 - DNA-based evidence of mutation in the LDLR, Apo B, PCSK9 mutation
 - Untreated LDL-C > 190 mg/dl AND Tendon xanthomas in patient or first/second degree relative
 - Untreated LDL-C > 190 mg/dl AND either first degree relative <60 years of age or second degree relative <50 years of age with premature heart disease

Drug	Prior Authorization Criteria
	<ul style="list-style-type: none"> • Untreated LDL-C > 190 mg/dl AND First or second degree relative with total cholesterol >290 mg/dl ○ Recent fasting lipid panel (<3 months) provided ○ Patient has failed 3 attempts with statins in combination with ezetimibe, including an attempt with a low or alternatively-dosed statin (twice weekly low-dose rosuvastatin or atorvastatin, low-intensity pitavastatin or pravastatin) in combination with ezetimibe <ul style="list-style-type: none"> ▪ LDL level remains > 100 mg/dL OR ▪ LDL level remains > 70 mg/dL AND patient has diabetes. ○ Documentation of trial attempts must be submitted, including trial dates, LDL levels before and after, and description of adverse events leading to discontinuation. • Continuation criteria (all indications): <ul style="list-style-type: none"> ○ Patient has demonstrated adherence to therapy via claims data ○ Both recent (within 3 months) and pre-PCSK-9 therapy baseline LDL levels provided.
Picato	<ul style="list-style-type: none"> • Diagnosis of actinic keratosis • Prescribed by dermatology • Failure of first-line agents
Prolia (Medical Benefit)	<ul style="list-style-type: none"> • Usage compatible with the FDA (Food and Drug Administration) approval • Diagnosis of osteoporosis <ul style="list-style-type: none"> ○ Failure of oral bisphosphonate therapy and intravenous bisphosphonate therapy (Reclast) for at least one of the following reasons: <ul style="list-style-type: none"> ▪ Diagnosis of gastrointestinal conditions such as Barrett's esophagus, esophageal erosions, or delayed esophageal emptying ▪ Progression of bone loss as documented by bone density measurements after at least 12 months of adherent therapy ▪ Occurrence of osteoporotic fracture or atypical femur fracture while on treatment ▪ Change in treatment plan after completing 3 to 5 years of bisphosphonate therapy for a patient who is at high risk of fracture • Or, diagnosis of breast cancer with aromatase inhibitor-induced bone loss • Or, diagnosis of prostate cancer with androgen deprivation-induced bone loss
Promacta	<ul style="list-style-type: none"> • Diagnosis of chronic idiopathic thrombocytopenia purpura of at least 6 months duration • Failed at least 2 prior immunosuppressive therapies • Age >18 years of age • Approval duration should be no longer than 8 weeks with reauthorization required demonstrating platelet response above 50,000/ml
Pulmonary Arterial Hypertension (PAH) (Adcirca, Letairis, Opsumit, Tracleer)	<ul style="list-style-type: none"> • Prescribed by pulmonologist or cardiologist • Pulmonary arterial hypertension diagnosed by right heart catheterization and includes a 6 minute • Walk distance between 150 and 450 meters • Failure of vasodilators, calcium channel blockers, and sildenafil (Revatio)
Qnasl	<ul style="list-style-type: none"> • Failure of preferred agents, such as fluticasone, flunisolide, and Nasonex
Quillivant XR	<ul style="list-style-type: none"> • Diagnosis of ADHD • Inability to swallow pills • Requires long-acting preparation
Regranex	<ul style="list-style-type: none"> • Prescribed by wound management specialist • Diagnosis of severe diabetic neuropathic ulcers of the lower extremities that extend into the subcutaneous tissue or beyond and have an adequate blood supply
Relistor	<ul style="list-style-type: none"> • Opioid-induced constipation in patients with advanced illness receiving palliative care • Documentation of failure or intolerance to other laxative agents (osmotic, stimulant and bulk laxatives)
Restasis	<ul style="list-style-type: none"> • Prescribed by an ophthalmologist or optometrist
Revlimid	<ul style="list-style-type: none"> • Prescribed by oncologist according to FDA indication and/or NCCN guidelines
Riluzole (Rilutek)	<ul style="list-style-type: none"> • Diagnosis of amyotrophic lateral sclerosis
Rubraca	<ul style="list-style-type: none"> • Prescribed by oncologist • Diagnosis of advanced ovarian cancer • Patient has a BRCA mutation (documentation of FDA-approved test) • Patient has been previously treated with 2 or more lines of chemotherapy
Rydapt	<ul style="list-style-type: none"> • Prescribed by, or in consultation with, an oncologist or hematologist • FDA indication

Drug	Prior Authorization Criteria
	<ul style="list-style-type: none"> ○ Newly diagnosed acute myeloid leukemia (AML) that is FLT3 mutation positive as detected by an FDA-approved test, in combination with standard cytarabine and daunorubicin induction and cytarabine consolidation ○ Aggressive systemic mastocytosis (ASM) <ul style="list-style-type: none"> ▪ One or more C-Findings ○ Systemic mastocytosis with associated hematological neoplasm (SM-AHN) <ul style="list-style-type: none"> ▪ SM diagnostic criteria plus clonal hematologic nonmast cell lineage disorder ○ Mast cell leukemia (MCL) <ul style="list-style-type: none"> ▪ Bone marrow biopsy shows a diffuse infiltration, usually compact, by atypical, immature mast cells ▪ Bone marrow aspirate smears show 20% or more mast cells
Sabril	<ul style="list-style-type: none"> • Diagnosis of complex partial seizures <ul style="list-style-type: none"> ○ Trial of all formulary alternatives or documentation explaining why some formulary options are not medically appropriate ○ Copies of SHARE enrollment materials ○ Documentation of ophthalmic examinations according to SHARE program requirements. • Or a diagnosis of infantile spasms <ul style="list-style-type: none"> ○ Age-restricted <2 years of age ○ If approved, for an initial coverage duration of 30 days
Samsca	<ul style="list-style-type: none"> • Diagnosis that matches the FDA-approved labeling, excluding the coverage for use in the outpatient management of congestive heart failure • Laboratory confirmed hyponatremia • Therapy should be initiated in hospital • Limited to a maximum of 30 days of therapy
Sancuso	<ul style="list-style-type: none"> • Request from oncology • Diagnosis of cancer with treatment using a highly emetogenic or moderately emetogenic chemotherapy regimen
Savella and other fibromyalgia agent Lyrica	<ul style="list-style-type: none"> • Diagnosis of fibromyalgia by ACR criteria of widespread pain/symptoms for at least 3 months using the Widespread Pain Index (WPI) and Symptom Severity (SS) scale • Failure of 12-week trials of first-line agents (amitriptyline, cyclobenzaprine, duloxetine, gabapentin, SSRI +/- NSAID, tramadol +/- acetaminophen) • Non-pharmacologic therapies (documented exercise plan, cognitive behavioral therapy, complementary therapies)

Zytiga	<ul style="list-style-type: none"> Prescribed by oncologist Diagnosis of metastatic castrate resistant prostate cancer who has received prior chemotherapy containing docetaxel

DRUG EXCEPTION

This section does not apply to non-covered drugs.

If the physician believes that a drug not found on the MercyCare formulary is necessary for the patient then they must apply for the drug exception.

Drug exception criteria:

1. Patient previously treated with the drug AND it would be dangerous to the patient's health or unreasonably difficult to switch patient to formulary alternatives, or
2. The requested drug is medically necessary and ALL formulary alternatives (including drugs from other drug classes) are inappropriate for the patient, or have failed.

In addition the drug must be:

1. Medically necessary for patient's medical condition, and appropriate given the patient's medical history; and
2. Prescribed in a manner consistent with its FDA approved indication(s) and manufacturer recommendations; and
3. Prescribed in its most cost-effective dosing regimen; and
4. Used in a manner consistent with any and all guidelines and criteria developed, adopted, or researched by MercyCare.
5. Not listed as an exclusion in the member's drug rider or summary plan description.

All exceptions are subject to approval from MCHP. If you need a copy of the Non-Formulary request form, please visit our website at www.mercycarehealthplans.com, or contact customer service at (800) 895-2421.

SPECIALTY PHARMACY PROGRAM

MercyCare Health Plans utilizes Mercy Pharmacies, which are categorized as specialty pharmacies. Only these specialty pharmacies are used to dispense select medications, which are indicated on the formulary as MSP or Tier 4. Some of the medications require prior authorization from MercyCare Health Plans. After the request has been received and approved, MercyCare members are required to select a Mercy Pharmacy to obtain the prescribed medication. These medications will be limited to either a 15 or 30 day supply per prescription fill or a specified quantity based on limits established in the formulary. Depending on the drug and the member's plan, an alternative Network Specialty Pharmacy may be designated. For more information, contact customer service at (800) 895-2421.

Mercy Woodstock Pharmacy

2000 Lake Ave
Woodstock, IL 60098
Hours: M-F 9-6, Sat 9-1
815-337-4116

EXTENDED SUPPLY PROGRAM

MercyCare offers an extended supply program that makes it more convenient for members to receive their prescriptions. If their prescription drug benefit allows them to receive a 90-day supply, they may be able to participate in this program. Members have the option to pick up their 90-day prescription at any Mercy Health System pharmacy. If they choose to have their 90-day supply mailed, the Mercy Mall Pharmacy will be the mail order pharmacy. If you would like more information about our program please visit our website at www.mercycarehealthplans.com, or contact customer service at (800) 895-2421.

Some benefit designs require that mail order through Mercy Mall Pharmacy be used for certain medications. To identify whether your benefit design requires mandatory mail order medications, please check your drug rider or summary plan description, or contact customer service at (800) 895-2421. Customer service will provide you with a written list of mandatory mail order medications upon request.

Not all medications are good candidates for extended supply, such as antibiotics, medications that are taken on an "as needed" basis and medications that require special handling, such as refrigeration. This includes specialty drugs (SP, MSP, or Tier 4), which are only covered up to a 30-day supply for each fill.

PRESCRIPTION DRUG GLOSSARY

CO-INSURANCE

Co-insurance means the member's portion, expressed as a percentage of the fee for covered services that the member is required to pay for certain covered drugs.

CO-PAYMENT

Co-payment means the portion, expressed as a fixed dollar amount, that the member is required to pay for certain covered drugs.

DEDUCTIBLE

Deductible means a pre-determined amount of money that an individual member may have to pay before benefits are payable by MercyCare. The single deductible applies to each member each contract year, and the family deductible amount is the most that the employee and his or her dependents must pay each contract year.

GENERIC

A generic equivalent means a prescription drug available from more than one drug manufacturer that has the same active therapeutic ingredient as the brand or trade name prescription drug prescribed.

MAXIMUM OUT-OF-POCKET

Maximum out-of-pocket means the portion of covered charges for which the member is responsible because of applicable co-insurance, co-payment, and/or deductible provisions.

MERCYCARE DRUG FORMULARY

MercyCare Drug Formulary means the comprehensive listing of prescription medications available to a member.

NON-PARTICIPATING PHARMACY

Non-participating pharmacy means any pharmacy that does not have a contractual relationship with MercyCare for the provision of pharmacy services or supplies to members.

OTC (OVER-THE-COUNTER)

Over-the-counter (OTC) drugs on the preferred drug list are covered only with a prescription.

NON-PREFERRED DRUG

All drugs not on MercyCare's preferred drug list.

PARTICIPATING PHARMACY

Participating pharmacy means any pharmacy that has contracted with MercyCare to provide pharmacy services or supplies to members.

PREFERRED DRUG

Name brand, generic or OTC drugs in our preferred drug list as determined by MercyCare.

PRESCRIPTION DRUG

Prescription drug means any medicinal substance, the label of which, under the Federal Food, Drug and Cosmetic Act, is required to bear the legend: "Caution: Federal Law prohibits dispensing without a prescription."

USUAL AND CUSTOMARY CHARGE

Usual and customary charge is the dollar amount for a treatment, service or supply provided by a health care provider that is reasonable, as determined by the Plan, when taking into consideration, among other factors determined by MercyCare, amounts charged by health care providers for similar treatment, services and supplies when provided in the same general geographic area under similar or comparable circumstances.

PHARMACY AND THERAPEUTICS (P&T) COMMITTEE

The MercyCare P&T Committee consists of physicians and participating pharmacists whose primary purpose is to recommend policies in the evaluation, selection, and therapeutic use of and to educate members on matters related to drugs and drug use. The P&T Committee meets quarterly to determine formulary status of new-to-market and existing drugs. Updates are communicated to the MercyCare Health Plans Participating Providers through physician newsletters.

PRODUCT SELECTION CRITERIA

The MercyCare P&T Committee will consider all FDA-approved drugs for inclusion on the formulary, except those drugs in therapeutic classes excluded from coverage by MercyCare. The evaluation includes a literature review, and expert opinion may also be sought. Formal reviews are prepared which typically address the following information:

- Safety
- Efficacy
- Comparative studies
- Approved indications
- Adverse Effects
- Contraindications/Warnings/Precautions
- Pharmacokinetics
- Patient administration/compliance considerations
- Medical outcome and pharmaco-economic studies
- Cost

When a new drug is considered for formulary inclusion, an attempt will be made to examine the drug relative to similar drugs currently on formulary. In addition, entire therapeutic classes are periodically reviewed. The class review process may result in deletion of one or more drugs in a particular therapeutic class, in an effort to continually promote the most clinically useful and cost-effective agents. If a physician requests the addition of an FDA-approved drug to the formulary, it will be reviewed for formulary addition. Such requests should be directed to the Director of Pharmacy of MercyCare Health Plans (MCHP).

All the information in the MercyCare formulary is provided as a reference for drug therapy selection. The final choice of specific drug selection for an individual rests solely with the prescriber.

For more information see policy on following page.

PHARMACEUTICAL MANAGEMENT PROCEDURES

I. Policy and Procedures

- A.** Criteria used to adopt pharmaceutical management procedures and new or emerging technology
1. The P&T Committee considers all FDA-approved drugs for addition to the formulary except those drugs in therapeutic classes that are excluded from coverage by MCHP.
 2. A review of a specific drug or drug class is carried out within 12 months if any one of the following review triggers occur:
 - a) FDA approval and subsequent market availability of a new molecular entity or new biologic product that is not specifically excluded from the MCHP prescription drug benefit.
 - b) Significant new safety data or FDA safety warning that may indicate a need to review MCHP current policies regarding that medication's formulary status, restriction status, etc., including the approval of new dosage forms that have clinically meaningful advantages.
 - c) Prescriber request for review.
 - d) P&T committee recommendation for a review.
 3. If a review is not possible or desirable within 12 months of a trigger, the P&T committee will be apprised of the situation and asked to endorse an extension.
 4. Drugs or drug classes not meeting the criteria of a review trigger will be reviewed at the discretion of the HPPD (Health Plan Pharmacy Director), P&T Committee Chairperson, or request from a P&T committee member.
 5. Prioritization of the timing of drug reviews within 12 months is based on a variety of factors. These factors considered in determining the timing of a review by the P&T Committee include:
 - a) Breakthrough product or new mechanism of action (significant safety or efficacy differences, etc.) versus a "me-too" product
 - b) Presence or absence of safety signals, depth and duration of available data on safety
 - c) Depth and duration of available data on efficacy, presence of head-to-head comparisons with existing products
 - d) Relevance of the indications to MCHP's membership
 - e) Volume of prior authorization requests or volume of non-formulary exceptions
 - f) Opportunities to improve the cost-effectiveness of care
 - g) Concern of inappropriate utilization of new products from an efficacy, safety, or cost-effectiveness standpoint or utilization patterns of existing products that reflect inappropriate or less cost-effective utilization
 - h) The HPPD, HPMD (Health Plan Medical Director), and Behavioral Health Medical Director will monitor a variety of information sources on an ongoing basis to identify triggers for P&T review. Sources of information include FDA email updates for approvals and safety warnings, review of table of contents of medical journals such as New England Journal of Medicine, Journal of American Medical Association, weekly new drug reports from Medispan, Medical Associations, National Commissions, CDC, NIH, peer-reviewed medical journals, and/or other authoritative compendia, and a variety of daily health news email services.
 6. When a possible trigger is identified, the HPPD, HPMD, Behavioral Health Medical Director and the P&T Chairperson determine if the criteria for a review trigger has been met. If so, the review is prioritized to occur sometime in the next 12 months.
 7. The evaluation includes a literature review and expert opinion. Formal reviews are prepared which address the following information: safety, effectiveness, comparison studies, approved indications, adverse effects, contraindications, pharmacokinetics, patient compliance considerations, medical outcomes, and pharmacoeconomic studies.
 8. New agents are compared to formulary agents of similar type.
 9. During the review process, the following criteria will be used to adopt pharmaceutical management procedures:
 - a) Procedures will be determined according to the specific class of pharmaceutical
 - b) Current formulary alternatives and pharmaceutical classes

- c) When limitations are put into place, prior authorization criteria, exception process, formulary alternatives will be developed, and evidence showing preferred-status pharmaceuticals can produce similar or better results for the majority of the membership.
 - d) General membership demographics: to include but limited to, medical condition, prevalent disease states, age, race, gender
 - e) Prescribing patterns of participating providers
 - f) The impact on public safety
 - g) Current medical practice standards
10. Clinical evidence from external organizations will be used and incorporated in pharmaceutical management procedures and pharmaceutical review process.
- a) External organizations include but not limited to Medical Associations, National Commissions, NCCN, CDC, NIH, peer-reviewed medical journals, and/ or other authoritative compendia
 - b) Expert opinion reviewer is defined and an internal or external organization or individual practitioner, self proclaimed or otherwise noted as an expert in a specific practice of medical practice or pharmacology.
 - c) External clinical evidence will be incorporated in the review process when any of the following conditions are met:
 - (1) Requested by the HPMD, HPPD, or any P&T committee member.
 - (2) If the committee members do not have knowledge or expertise to review a medication that is outside of their scope of practice.

II. Pharmaceutical Restrictions

A. MercyCare has a clinical review process whereby medications requiring prior authorization or formulary exceptions to the formulary can be reviewed for coverage purposes on behalf of members. Requests are accepted from practitioners or members via fax or mail on the MCHP Prior Authorization or Non-Formulary Exception Form. The HPP (Health Plan pharmacist) or HPPD reviews requests and make determinations based on P&T approved prior authorization criteria and medical necessity. Requestors and members are notified of decisions via mail. The HPP or HPPD is available to members or practitioners to discuss the prior authorization criteria or the reasons for a denial at 800-895-2421.

1. Related Documents:

- a) Prior Authorization and Non-Formulary Exception forms

B. Quantity Limits

1. Quantity limits are established to promote safe and appropriate cost-effective use of specific classes of medications for both formulary and non-formulary agents.
2. Quantity limits will be determined by the P&T committee during the medication review process.

C. Therapeutic Interchange

1. The HPP under the authority and supervision of the P&T Committee and HPPD will carry out Therapeutic Interchange.
2. The P&T committee will approve appropriate diagnosis/conditions in which to apply any pharmaceutical interchange program.
 - a) Therapeutic Interchanges will occur with the physician's signed order.
 - b) Members and pharmacies will be notified by phone, facsimile machine, or via the mail.

D. Step Therapy Protocols

1. For the purposes of this policy and procedure, Step Therapy is defined as the requirement of a trial of a prerequisite therapy before the approval of coverage for Step Therapy medications.
2. All Step Therapy protocols must be based on current scientific data and approved by the P&T Committee on an annual basis.

3. The committee will oversee each step that defines what agents and duration are appropriate for the protocol.
4. Exceptions to the requirements of Step Therapy protocols are included as part of the protocol. Exceptions not based on established criteria are handled on a case-by-case basis
5. If a provider wants to bypass the step therapy then a prior authorization/exception request will be submitted.
6. Clear communications are distributed to practitioners and members prior to implementation of Step Therapy protocols.
7. Prerequisite therapies, or treatment algorithms, must be clearly communicated to practitioners before implementation of Step Therapy protocols. Communications will include information on the protocol, as well as instructions for how the practitioner can request continued coverage of included medications.
8. The MercyCare Practitioner Newsletter and the MercyCare Drug Formulary (both are available on www.mercycarehealthplans.com) are used as the vehicles to communicate information on Step Therapy protocols to practitioners.
9. Members impacted by Step Therapy protocols will receive communications regarding any changes in coverage before implementation of Step Therapy protocols. Communications will include information on the protocol, as well as instructions for how the member can request continued coverage of included medications.

III. Pharmaceutical Patient Safety Issues

A. Recalls

1. New safety information gained from post-marketing clinical trials and real world experience often leads to the recognition of previously undetected adverse effects, administration issues, drug interactions, monitoring parameters, and other issues. The recognition of these issues often leads to new black box warnings in product labeling or market withdrawal of products. Additionally, safety issues related to the manufacturing, packaging, and storage of a drug product, such as contamination, incorrect labeling, and other product specification issues, lead to lot-specific drug product recalls by the FDA. The FDA classifies such safety recalls into 3 categories:
 - a) **Class I** recalls are for dangerous or defective products that predictably could cause serious health problems or death. Examples of products that could fall into this category are a food found to contain botulism toxin, food with undeclared allergens, a label mix-up on a life-saving drug, or a defective artificial heart valve.
 - b) **Class II** recalls are for products that might cause a temporary health problem or pose only a slight threat of a serious nature. One example is a drug that is under-strength but that is not used to treat life-threatening situations.
 - c) **Class III** recalls are for products that are unlikely to cause any adverse health reaction, but that violate FDA labeling or manufacturing regulations. Examples might be a container defect (plastic material delaminating or a lid that does not seal); off-taste, color, or leaks in a bottled drink, and lack of English labeling in a retail food.
2. In cases of voluntary or FDA-mandated product withdrawals from the market and Class I safety recalls, both members and prescribers with claims will be notified of the withdrawal or recall within 10 days. Members who have had a claim for the affected medication in the past 6 months will be identified from claim history. For recalls, since MercyCare does not have access to the specific lot numbers that were dispensed from the pharmacy, all patients and prescribers with recent claims for the product will be notified. Included in the notification will be the statement that the recall only applies to specific lots and the patient may or may not have product from the lot number in question. The patient will be instructed to contact the pharmacy to determine if the affected lot number had been part of their stock.
3. Members and prescribers will be identified and notified when affected by medication recalls published by the FDA or Market withdrawals by mail.
4. In addition a direct link to Medwatch provided on MercyCare Health Plans web site pharmacy page.
5. When products are withdrawn with a reasonable probability that the use of the product will cause serious adverse health consequences and for class I recalls, the notification to members and prescribers will be expedited (sent within 10 calendar days).

6. With Class II recalls or withdrawals, member and prescriber notification will take place within 30 calendar days of the withdrawal notice being posted by the FDA.
7. Affected members/practitioners are identified via pharmacy claims.
8. The HPP or HPPD will stop claims for all FDA medication ordered market withdrawals, including manufacturer withdrawals that are for a medication that are not Lot or Batch number specific.

IV. Reviewing and Updating Procedures

- A. The pharmaceutical management procedures will be reviewed annually.
- B. The P&T committee will meet at least quarterly.
 1. The committee will review relevant new information regarding pharmaceuticals
 2. New information may include but not limited to:
 - a) FDA warnings, notices, or publications
 - b) Manufacturer warnings, notices, or publications
 - c) National commissions, medical associations, or peer-reviewed journal notice or publication
- C. Entire therapeutic classes are periodically reviewed in order to maintain the most clinically useful, safe, and cost-effective agents.

V. Pharmacist and Practitioner Involvement

- A. The Pharmacy & Therapeutics (P&T) Committee: Consists of diverse a group of physicians, pharmacists, nurses, and managers from a variety of specialties and general practice. Their primary purpose is to recommend policies in the evaluation, selection, and therapeutic use of drugs and to educate members on matters related to drugs, drug use, and drug interactions.
- B. Any committee member may request to have an expert opinion to assist with decision-making. The P&T chair or vice person will seek a practitioner with the expertise to advise or assist the P&T committee. The P&T committee will decide if the selected expert is knowledgeable to provide the requested information.
- C. Expert opinion reviewer is defined and an internal or external organization or individual practitioner, self proclaimed or otherwise noted as an expert in a specific practice of medical practice or pharmacology.
- D. The HPPD or HPMD may also request feedback regarding pharmaceutical management procedures from participating practitioners, prior to presenting them to the P&T Committee.

VI. Availability of Procedures

- A. Practitioners are informed when changes are made on the Formulary, Prescription Drug Benefit Design, how to request medical exceptions or prior authorizations, who to contact regarding other questions or comments, and on other pharmaceutical management procedures. This is done with an annual mailing notification, which directs practitioners to MCHP website at www.mercycarehealthplans.com. Additionally, up-to-date information regarding the formulary, Prescription Drug Benefit Design, the Prior Authorization Process and how to request exceptions, and other pharmaceutical management procedures is available at any time on MCHP website at www.mercycarehealthplans.com. Printed copies of web content can be requested by contacting Customer Service at (800) 895-2421. The availability of up-to-date pharmacy program information on the website as well as the ability to request printed copies by contacting customer service is communicated in an annual mailing.

VII. Procedure for Formulary Medications that require Prior Approval or Non-Formulary Exception Requests

- A. **Required Information for Medically Necessary Determination**
 1. MercyCare will accept medication prior authorization and formulary exception requests from members or practitioners by fax or mail.
 2. MercyCare will differentiate between “Urgent” and “Non-Urgent” medication requests.
 3. UM decisions will be rendered consistent with the formulary status, restriction status, and any quantity limits of a medication as designated by the P&T Committee. Decisions will be made by the HPP, HPPD or HPMD and will be in a manner consistent with Prior Authorization Criteria and the patient’s benefit design. Formulary exception requests will

be reviewed and evaluated for a medical necessity over formulary alternatives or an indication that the formulary alternatives are contraindicated or not appropriate for the specific patient.

4. Medical information needed to make a decision (see Prior Authorization or Non-Formulary Exception Form)
 - a) Member information: name, date of birth, member number
 - b) Requested drug: name, (dosage form, schedule, and duration of therapy as necessary)
 - c) Indication for treatment and other pertinent diagnoses
 - d) Current and past treatment of medical condition including alternative medications failed and reason of failure, or contraindications to formulary alternatives
 - e) The HPP or HPPD can obtain the patient's pharmacy claims history on-line to complement the information obtained directly from the requestor.
5. If required additional medical information will be requested of the provider before rendering a decision: If the appropriate medical information is not provided with the initial request, MercyCare will contact the prescriber to obtain additional information necessary before processing the request.
6. The requests are date stamped and entered in to the pharmacy database, then placed in a confidential folder for review by the HPP or HPPD.
 - a) The forms are assessed for completeness, and if the appropriate medical information is not provided with the initial request, MercyCare will contact the prescriber to obtain additional information necessary before processing the request via phone/fax.
 - b) If the HPP or HPPD is unable to obtain the information requested within the time frame listed for pharmacy decisions, a 45-day extension letter for non-urgent requests and 48-hour extension letter for urgent pre-service requests. The extension letter is sent to the requesting practitioner, and a copy is sent to the member. The extension letter will describe the information that we are waiting for.
 - c) If MCHP is unable to make a decision due to matters beyond its control, they will notify the member (or the member's authorized representative); a copy will be sent to the requesting practitioner of the need for an extension and the date (not to exceed 15 days) by which it expects to make a decision.
 - d) If we have not received the additional information within the stated time frame on the extension letter, a denial based on lack of medical information letter is sent to the member with a copy to the requesting practitioner.
 - e) The denial/approval decision is made within the time frame for either urgent pre-service or non-urgent decisions.

B. Denied Prior Approval Drug requests

1. HPP or HPPD will state clearly on the denial letter the reason for the denial and criteria for approval.
2. The Health Plan will notify the member via letter of the denial.
 - a) The prescribing practitioner will get a copy of member's denial letter and a verbal notification of denial from the HPP or HPPD.
 - b) Information regarding the IRO appeal process is sent with the denial letter to the member and practitioner.

C. Approved Prior Approval Drug requests

1. The member and practitioner's office are notified via letter.

VIII. Required for Review of Pharmaceuticals

A. In an effort to assess the appropriateness of new technologies and new uses of existing technologies on a consistent basis, MCHP reviews documentation from:

1. Appropriate regulatory bodies (e.g., the Food and Drug Administration)
2. Hayes® Medical Technology
3. NCCN

4. Clinical literature and medical journals (including scientific evidence)
5. Professionals with expertise related to the technology such as but not limited to:
 - a. Professional physician organizations
 - b. Network providers with specialty certifications relevant to the requested new technology
 - c. MCHP-contracted independent review services
6. Center for Medicare and Medicaid Services (CMS) (if applicable)
7. MercyCare Health Plans Certificates of Coverage.

B. The collected documentation and evidence should prove, based on established medical facts, that:

1. The technology being requested can alter or affect the outcome of a disease, illness, injury, or condition.
2. The technology's benefits must clearly outweigh any harmful effects.
3. The technology's benefits must be equally or more beneficial than the current treatments being used.
4. The technology must be available or successful outside the investigational setting.

IX. Requests for New or Emerging Technology

- A.** The Quality Health Management Department receives a request for a new or emerging technology, or the Quality Health Management Department initiates a request for inclusion or consideration.
- B.** Requests that originate from outside the Quality Health Management Department at MCHP must be submitted in writing.
- C.** A pharmaceutical must have final approval from the Food and Drug Administration for the specific indications and use that are being evaluated.
- D. Pharmaceutical Requests**
 1. Drug requests are forwarded to the HPP or HPPD
 2. The HPP or HPPD through a documented process:
 - a. Reviews the request and if necessary seeks additional information from appropriate government regulatory bodies, published scientific evidence and documentation, or solicits opinions from professionals with expertise related to the requested drug.
 - b. Reviews MCHP certificates of coverage and formularies for specific benefit exclusions.
 - c. Reviews MCHP certificates of coverage and formularies for similar covered procedures or items.
 3. The request is evaluated and voted on by the P&T Committee. Please see policy Pharmaceutical Management Procedures PH-01.
 4. Drugs or biological products must have final approval from the Food and Drug Administration.
 5. The P&T Committee reviews the literature, evidence, and opinions and renders a decision on the requested drug.
- E.** The appropriate committee will vote to make a recommendation.
- F.** The formulary is updated to reflect the changes. Members and providers are notified of formulary changes via the website.
